CAS Pack Corporation has been providing top quality products and service to the produce, poultry, seafood and industrial sectors along the east coast since 1966. Founded by Charles Alfred Smith, a pioneer in the development of the wax corrugated carton, CAS Pack Corporation has proudly been family owned and operated for three generations.

Quality, service and convenience are the benchmarks of our “satisfaction guaranteed” attitude. We have two locations for manufacturing and distribution conveniently located in Bensalem, PA and Hammon-ton, NJ. These locations allow us to warehouse enough inventories to ensure just-in-time deliveries. We are also able to offer a quick turn-around for all custom products.

With experience spanning three generations, CAS Pack Corporation has been instrumental in influencing the design of the packaging currently used in the seafood and agricultural industries. We have the experience and capabilities to custom design all of your packaging needs from the boxes to the artwork.

Call our experienced sales team and we'll start customizing your packaging needs TODAY!

CasPack also carries cleaning & sanitation products:

Foaming Cleanser CS 223 Mild general purpose cleaner for use on equipment surfaces prior to sanitizer application. Specially blended surfactants penetrate and solubilize fruit sugars and other soils associated with produce. Easy to apply and rinse from equipment surfaces. Reduces labor costs associated with manual scrubbing and cleaning.

Portable Foam system Holds 20 gallons of foam solution. Stainless steel frame. 40 feet of hose. Easy to operate. Loose or heavy foam. Simply connect to pressurized air; no electricity needed. Just wheel it where you need it and turn it on.

Portable sanitation spray system Simply mix sanitizer in tank, plug in, and you are ready to spray! 75' of hose included. Plug into standard receptacle. Designed for forklift transport; compact design for easy storage and transport. Efficiently apply final sanitizing spray to multiple lines.

Selectrocid® Highland Fresh Technologies is pleased to announce the introduction of Selectrocid, a unique antimicrobial product based upon patented technology that is now EPA-registered for use on fruit and vegetables in food processing facilities and on hard, non-porous food processing equipment. The power of chlorine dioxide is now available in one convenient and easy to use product.

What is Selectrocid and how do I use it? Selectrocid is a greater than 99% pure solution of chlorine dioxide in tap water. Selectrocid is produced by a patented sachet that generates a specific amount of chlorine dioxide when water is added. Selectrocid now makes it possible to bring the proven antimicrobial performance advantages of high-purity chlorine dioxide to the produce and food processing industries. Selectrocid can be used as a direct spray to treat raw agricultural commodities in food processing facilities. It can also be used as an antimicrobial sanitizer or disinfectant for hard, non-porous surfaces, including food processing equipment. Check the product label and technical bulletin for additional information on the proper uses of Selectrocid.

Why wasn't chlorine dioxide available before? Until the development of Selectrocid, chlorine dioxide applications were primarily limited to drinking water purification and the pulp and paper industry (slime removal), where it often replaced chlorine. Chlorine dioxide applications were limited because this water soluble gas could not be shipped and had to be generated on site, requiring significant capital investment in mechanical generation equipment that is cost prohibitive in many industries. Selectrocid results in high-purity chlorine dioxide at neutral pH without the disadvantages of other methods of generation.

We also supply labels..... in all sizes, customized to your specific needs, to help market your products. We have the ability to customize the print on your label, in up to seven colors! Call to speak with one of our specialists to assist you with your label needs.
